

HIT Token — Powering the Future of Fitness The HIT Token is the native utility token of our fitness ecosystem, designed to connect users, applications, and investors through blockchain-powered solutions. **Real Products, Real Utility** Our development team has already delivered Remedly, a fitness and health application available on the App Store. With a growing audience and continuous improvements, Remedly proves our commitment to building real, working products. Our second project, High Intensive Training (HIT), is currently in development. This app will focus on high-intensity workouts and advanced performance tracking while integrating blockchain features such as tokenized rewards, gamification, and NFT-based achievements. **Value for Holders** The HIT Token is designed to capture and grow value as the ecosystem expands: **Revenue Sharing Commitment:** The team will allocate 10% of profits from ecosystem products directly into the HIT Token, creating sustainable buy pressure and long-term holder benefits.

Multiple Use Cases: The token will power in-app payments, premium subscriptions, competitive challenges, and reward mechanisms.

Ecosystem Expansion: Future products will integrate HIT Token as their economic backbone, driving adoption and demand. **Vision** Our vision is to establish HIT Token as the digital currency for fitness and wellness applications worldwide. With a proven track record (Remedly), an ambitious roadmap (HIT App), and a transparent profit-sharing model, we are building a token with real fundamentals and long-term growth potential.
